

# Fortinet Virtual Appliance Solutions

## Consolidated Security, Management and Reporting

### Choice of Form Factor

Few organizations use 100% hardware or 100% virtual IT infrastructure today, creating a need for both hardware appliances and virtual appliances in your security strategy. Fortinet allows you to build the security solution that's right for your environment with hardware and virtual appliances to secure the core, the edge and increase visibility and control over communications within the virtualized infrastructure. FortiManager virtual appliances allow you to easily manage and update your Fortinet security assets – hardware, virtual or both – from a single pane of glass. FortiAnalyzer central reporting, FortiWeb web application firewall, FortiMail messaging security, FortiScan vulnerability management and FortiAuthenticator user identity management appliances round out Fortinet's current virtual appliance solutions.

### *Proven Success in Virtual Environments*

Fortinet introduced Virtual Domain (VDM) technology in 2004. Since that time, we have offered virtualized security to service providers and enterprises alike. With the addition of the virtual appliance form factor, Fortinet now offers greater choice and flexibility to customers by providing the ability to deploy our security solution within existing Cloud and virtualized infrastructure.

- Complete solution for the Cloud and virtualized data centers
- Rapid deployment capabilities
- Increased visibility within virtualized infrastructure
- Ability to manage physical and virtualized appliances from a 'single pane of glass' management platform
- Simple, scalable licensing models
- Support for multiple virtualization platforms

## Unmatched protection & flexibility

For your data center and cloud deployments, Fortinet's industry-leading combination of next generation physical

and virtual machine solutions provide you, with the protection and flexibility you need to easily and quickly take advantage of these technologies.

## Virtual machine security with unmatched product line breadth

Fortinet offers the industry's most complete virtual machine security technology line-up. You can deploy the security you need where

you need it in your cloud and data center environments, including unified threat management/next generation firewall, web application firewall, database and messaging security.

## The Fortinet Virtual Appliance Family

<b>FortiGate-VM</b> multi-threat security	<ul style="list-style-type: none"> <li>Enterprise-class protection against network, content and application-level threats</li> <li>Consolidated security in a virtual form factor</li> <li>5 virtual appliance models available.</li> </ul>
<b>FortiManager-VM</b> centralized management	<ul style="list-style-type: none"> <li>Command and control for Fortinet infrastructure</li> <li>Stackable license model to grow with your environment</li> <li>Enables Cloud providers to segment tenant policies into separate administrative domains (ADOMs).</li> </ul>
<b>FortiAnalyzer-VM</b> centralized reporting	<ul style="list-style-type: none"> <li>Aggregate log data for forensic analysis</li> <li>Perform vulnerability assessments of networked hosts</li> <li>Generate graphical reports to aid in demonstrating compliance</li> </ul>
<b>FortiMail-VM</b> messaging security	<ul style="list-style-type: none"> <li>Block spam and malware from users' inboxes</li> <li>Archive mail for compliance and e-discovery purposes</li> <li>Advanced inspection capabilities eliminates message-based threats before they can affect your users</li> </ul>
<b>FortiWeb-VM</b> web application security	<ul style="list-style-type: none"> <li>Protect, balance and accelerate web applications</li> <li>Improves security of confidential information and aides PCI compliance</li> <li>Security solution specifically designed to protect web applications; including cloud-based farm deployments</li> </ul>
<b>FortiScan-VM</b> vulnerability management	<ul style="list-style-type: none"> <li>Provides both active scanning and passive observation</li> <li>Identify and analyze unmanaged devices and assets on your network</li> <li>Offers remediation recommendations based on available patches and existing workflows</li> </ul>
<b>FortiAuthenticator-VM</b> user identity management	<ul style="list-style-type: none"> <li>Low cost per user and a stackable licensing model for a flexible and cost effective solution</li> <li>Standards-based secure authentication which works in conjunction with FortiTokens</li> <li>Certificate Authority functionality simplifies your CA management</li> </ul>
